Handling evidence in history: the case of Einstein's wife

Alberto A. Martínez

Historical claims in science need to be inspected carefully, just as
when testing hypotheses

- An online site, 75% of people polled believe that Einstein's wife, Mileva Maric, contributed to his works of 1905 (Annus Mirabilis' 4 papers published in *Annalen der Physik*)
- Nobel Prize in Physics in 1922
- Foundation of modern physics

Who are the authors

- 1. Those who provide substantial contributions to conception and design, data acquisition, or analysis and interpretation of data**
- 2. Those who involved in document drafting or provide critical review for important intellectual content**
- 3. Give final approval of publication**

The main principle of authorship in biomedicine

➤ **Creativity!**

AUTHORSHIP

Who's on first?

When scientists collaborate on an experiment and a paper, it can be hard to decide who gets the credit and how much.

BY AMBER DANCE

important than what the other person did," says Kosslyn.

Who do not qualify as authors

- **Those who only secure funding for research**
- **Those who only [perform lab tests]/collect data**
- **Those who only supervise the [research] project**

http://www.icmje.org/ethical_1author.html

Other criteria

Authorship implies **a significant intellectual contribution to the work, some role in writing the manuscript and reviewing the final draft** of the manuscript, but authorship roles can vary. Who will be an author, and in what sequence, should be determined by the participants early in the research process, to avoid disputes and misunderstandings which can delay or prevent publication of a paper.

[Publication Ethics Policies for Medical Journals](#)

Prepared by the **WAME** Publication Ethics Committee

Other criteria

**American Physical Society guidelines
authorship ... limited to ... a significant
contribution to the concept, design, execution
or interpretation of the research study.**

**All those who have made significant
contributions should be offered the opportunity
to be listed as authors. Other individuals who
have contributed to the study should be
acknowledged, but not identified as authors.**

http://www.aps.org/policy/statements/02_2.cfm

Other criteria

Ecological Society of America

authorship may legitimately be claimed if researchers:

- **conceived the ideas or experimental design;**
- **participated actively in execution of the study;**
- **analyzed and interpreted the data; or**
- **wrote the manuscript**

<http://esapubs.org/esapubs/ethics.htm>

Unresolved issues

- **Can merely data collection or statistical analysis, or professional writing justify authorship?**
- **Should each author be familiar and able to defend entire scholarly work?**
- **Should all co-authors be equally responsible for misinformation or ethical misconduct?**
- **Should editor be held responsible for inappropriate authorship?**

First author in bylines

- **Usually junior researcher**
- **Make the greatest contribution to the work**

Equal authorship

Elevated plasma level of HMGB1 is associated with disease activity and combined alterations with IFN-alpha and TNF-alpha in systemic lupus erythematosus

Academy of Medical Sciences, I.R. Iran

Global prevalence of honorary authorship

- **72%** in *Am J Roentgenol*

Bonekamp S, et al. AJR Am J Roentgenol 2012;198:1247-55

- **14.3%** in *pharmacy* journals, reaching **29.4%** in articles authored by more than 5 authors

Dotson B, et al. Am J Health Syst Pharm 2011;68:1730-4

Number of authors and their order

- **No regulations**
- **Multi-authorship raises suspicions over contributions**
- **Multi-authorship is time-consuming**
- **Limits of co-authors may depend on type of articles (RCT report – too many authors, reviews – 3-4, case report – 2-3, editorial – 1-2)**
- **Order is dependent on authors, their contributions and is resolved before the start**
- **Types of order: descending order of contribution, alphabetical listing and random order**

How to avoid inappropriate authorship

- ✓ “Authors by self-regulation can comply with definitions of authorship”
- ✓ “Journals [editors] can outline the requirements for authorship and require a list of author contributions”
- ✓ “Institutions can educate and encourage good publication practices”

That the collaborations of today's team-structured, multidisciplinary, and international science yield substantial benefits for scientific advancement is widely acknowledged. Not surprisingly, however, the Law of Unintended Consequences rears its devilish head. Among its outcomes are complex

Authorship problems

- **How to spot authorship problems**

http://publicationethics.org/files/u2/04F_How_to_spot_author_problems.pdf

Signs that might indicate authorship problems

- Corresponding author seems unable to respond to reviewers' comments
- Changes are made by somebody not on the author list (*check Word document properties to see who made the changes but bear in mind there may be an innocent explanation for this, e.g. using a shared computer, or a secretary making changes*)
- Document properties show the manuscript was drafted by someone not on the author list or properly acknowledged (*but see above*)
- Impossibly prolific author e.g. of review articles / opinion pieces (check also for redundant / overlapping publication) (*this may be detected by a Medline or Google search using the author's name*)
- Several similar review articles / editorials / opinion pieces have been published under different author names (*this may be detected by a Medline or Google search using the article title or key words*)
- Role missing from list of contributors (e.g. it appears that none of the named authors were responsible for analysing the data or drafting the paper)
- Unfeasibly long or short author list (e.g. a simple case report with a dozen authors or a randomized trial with a single author)
- Industry-funded study with no authors from sponsor company (*this may be legitimate, but may also mean deserving authors have been omitted; reviewing the protocol may help determine the role of employees -- see Gøtzsche et al. and commentary by Wager*)

Division of Rheumatology, Department of Internal Medicine, Faculty of Medicine, Gaziosmanpaşa University, Tokat, Turkey. bunyamin_k@hotmail.com

Abstract

Familial Mediterranean fever (FMF) is a systemic relapsing autoinflammatory disorder occurring in populations originating from the Mediterranean basin, mainly Turks, Levantine Arabs, Sephardic Jews, Druze, and Armenians. The prevalence of FMF shows considerable geographical variation. In Turkey, the prevalence rates were reported as 0.0027-0.25%. This field survey was conducted in different regions to investigate the frequency of FMF in a northern province of Turkey. This study was conducted in 70 areas (12 urban and 58 rural) in the province of Tokat, which is in northern Turkey. The population of Tokat was reported to be 828,000 at the last census in Turkey in 2000, about 530,000 for individuals aged >18 years

Behçet's disease: an update on pathogenesis, diagnosis and management of vascular involvement

Phaedon G. Kaklamanis,¹
Kenneth T. Calamia²

¹Emeritus Professor of Internal Medicine,
Athens Medical Center, Greece;

²Associate Professor of Medicine, Mayo
Clinic, Jacksonville, FL, USA

Abstract

The objective of this review is to summarize reports of the prevalence, clinical presentation, diagnostic methodology and treatment of vasculitic manifestations of Behçet's disease (BD). We performed a literature search on vasculitis in BD. Articles were selected which provided insight into the pathogenesis and clinical aspects of vasculitis. Vasculitis underlies

with cutaneous, musculoskeletal, vascular and nervous system manifestations.¹ The etio-pathogenesis of the disease remains obscure, although genetic predisposition, environmental factors and immunological abnormalities have been implicated.^{2,3} It has recently been proposed that BD is an autoinflammatory disorder,⁴ although there is no consensus.⁵ People from the Far East, the Middle East and the Mediterranean basin are more commonly affected than those from other parts of the world.⁶ In Northern Europe, Central Africa and the United States the disease is infrequent.⁷ All ages may be affected, although the frequency is higher in persons in the 3rd or 4th decade. The sex predominance varies widely among the diseased population in different geographical areas.^{6,7} Earlier studies suggested a male predominance in high prevalence areas, but more recent surveys indicate equal involvement of the sexes. In Western countries, females predominate.

Behçet's disease is included in the wide spectrum of vasculitides.⁸ Vasculitis is a principal pathological finding in BD and vessels of all sizes are involved, both in arterial and venous systems. Large vessel vasculitis is not

REFERENCES

List of authors, i.e. all people who contributed substantially to study planning, data collection or interpretation of results **and** wrote or critically revised the manuscript **and** approved its final version (ICMJE 2010). The authors listed first should be those who did most. Names of authors must be supplemented with their **affiliations** (during the study) and the **present address** of an author for correspondence. E-mail addresses of all authors should be provided, so that they can be contacted easily.

Acknowledgements: mention all people who contributed substantially to the study but cannot be regarded as co-authors, and acknowledge all sources

All people who are not listed as authors but contributed substantially to the study reported in this MS or assisted in its writing (e.g. language professionals) are mentioned in the acknowledgements.

All people named in the acknowledgements have agreed to this. However, they are not responsible for the final version of this MS.

Authorship

All people listed as authors of this MS meet the authorship criteria, i.e. they contributed substantially to study planning, data collection or interpretation of results *and* wrote or critically revised the MS *and* will be asked to approve the final version before publication.

All people listed as authors of this MS are aware of it and have agreed to be listed.

No person who meets the authorship criteria has been omitted.

EASE Guidelines for Authors and Translators of Scientific Articles to Be Published in English

2.1.9 Addressing Authorship Disputes

Editors are responsible for promoting the integrity of the literature and fostering good publication practices. Journals should develop and define authorship or contributorship criteria to minimize confusion about expectations (see section 2.2). Authorship disputes persist despite the current common efforts to make authorship or contributorship transparent. Examples include the “honorary” listing of a person who does not meet authorship criteria, submission

2.2 Authorship and Authorship Responsibilities

Trust is fundamental to scientific communication: trust that the authors have accurately reported their methods and findings, trust that authors have disclosed all potential conflicts of interest, and trust that editors have exercised sufficient diligence to ensure accurate reporting and disclosure by authors. Unfortunately, problems

by which entity(ies). It is unacceptable to neglect to identify such individuals. Other contributions that alone do not justify authorship include: assisting the research by providing advice, providing research space, departmental oversight, obtaining financial support, isolated analyses, or providing reagents/patients/animals/other study materials.

Authorship

Posted January 10, 2007

Authorship is a way of making explicit both credit and responsibility for the contents of published articles.

Number of Authors. Editors should not arbitrarily limit the number of authors.

If editors believe the number of authors is unusually large, relative to the scope and complexity of the work, they can ask for a detailed description of each author's contributions to the work. If some do not meet criteria for authorship, editors can require that their names be removed as a condition of publication.

Order of Authorship. The authors themselves should decide the order in which authors are listed in an article.

based (for example, to the research question, design, analysis, interpretation, and written description) should be an author. It is dishonest to omit mention of someone who has participated in writing the manuscript ("ghost authorship") and unfair to omit investigator who have had important engagement with other aspects of the work. (See the WAME policy statement,

acknowledged in the manuscript, as described below. It is dishonest to include authors only because of their reputation, position of authority, or friendship ("guest authorship").

COMMITTEE ON PUBLICATION ETHICS

Cooperation between research institutions and journals on research integrity cases: guidance from the Committee on Publication Ethics (COPE)

Journals also need to work with institutions when disputes arise between researchers (e.g. about authorship). As with research misconduct, journals are not in a position to investigate or resolve such disputes, but should refer them to the relevant institution(s).

Institutions should respond promptly and constructively to editors' requests for clarification of authorship

administers the grant or employs the researchers). Disputes between institutions over authorship or data ownership may require adjudication by an independent arbitrator agreeable to all parties.

Singapore Statement on Research Integrity

PRINCIPLES

Honesty in all aspects of research

Accountability in the conduct of research

Professional courtesy and fairness in working with others

Good stewardship of research on behalf of others

RESPONSIBILITIES

6. *Authorship*: Researchers should take responsibility for their contributions to all publications, funding applications, reports and other representations of their research. Lists of authors should include all those and only those who meet applicable authorship criteria.

7. *Publication Acknowledgement*: Researchers should acknowledge in publications the names and roles of those who made significant contributions to the research, including writers, funders, sponsors, and others, but do not meet authorship criteria.

<http://www.singaporestatement.org/>

Each author should take responsibility for a specific part of the work.

Authorship vs. contributorship

Authorship is dying: long live contributorship

The BMJ will publish lists of contributors and guarantors to original articles

In moving from authors to contributors and guarantors we are entering a new era, and it seems wise not to be too prescriptive. We need to learn from experience and adapt the new system. We look forward to working with contributors to improve both the credit and the accountability of published research.

Richard Smith *Editor, BMJ*

BMJ VOLUME 315 20 SEPTEMBER 1997

HONORARY AND GHOST AUTHORSHIP

Let's simply scrap authorship and move to contributorship

Why do science journals stick to authorship rather than moving wholesale to contributorship?¹

These days science is rarely undertaken by individuals. Most research is conducted by teams, often large teams with people with very different skills. A binary division into authors and non-authors is bound to be arbitrary and to cause problems, as a recent systematic

Contributorship

- ✓ The current ICMJE guidance is a farce.
- ✓ Most authors do not meet the ICMJE guidance.
- ✓ Include as an author each person who contributed to any of the items listed by the ICMJE.
- ✓ Plus - each author's role clearly state in a contributorship statement.

Authorship index

- ✓ **Points for certain activities are awarded:**
 1. **Intellectual input (planning/designing/interpreting) – maximum 25**
 2. **Practical input: data-capture - 25**
 3. **Practical input: data processing/organizing - 10**
 4. **Specialist input from related fields - 15**
 5. **Literary input (first complete draft of manuscript) - 25**
- ✓ **Passing a threshold score (25 out of 100 points) guarantees authorship**
- ✓ **Place in the bylines is based on scores**

Hunt R. Trying an authorship index. Nature 1991;352:187

Authorship index and the bylines

- ✓ Points for certain activities are awarded up to 1.0
- ✓ Contributions should be given in the bylines after the authors' names:

Author A(0.4), B (0.3), C (0.2), D (0.1)

The screenshot shows the homepage of the Journal of Medical Ethics. The header is purple with the journal title in white. Below the header is a navigation bar with buttons for 'Online First', 'Current issue', 'Archive', 'About the journal', and 'Submit'. A secondary navigation bar includes 'Online First', 'Current issue', 'Archive', 'Supplements', 'eLetters', 'Topic collections', and 'Blog'. The main content area displays the article title 'Research ethics' and 'Paper' followed by the article title 'Honorary authorship epidemic in scholarly publications? How the current use of citation-based evaluative metrics make (pseudo)honorary authors from honest contributors of every multi-author article' and the author's name 'Jozsef Kovacs'.

Paper

Honorary authorship epidemic in scholarly publications? How the current use of citation-based evaluative metrics make (pseudo)honorary authors from honest contributors of every multi-author article

Jozsef Kovacs

Authorship points

- **1,000-point system**
- **The whole idea - 250 points**
- **Writing the whole paper - 250 points**
- **Full design, running experiments and analysing the data – 500 points**
- **Researchers who score 100 points make the author list, with each person's point total determining their rank**

Authorship problems in scholarly journals: considerations for authors, peer reviewers and editors

Armen Yuri Gasparyan · Lilit Ayvazyan ·
George D. Kitas

Table 1 Options to ensure fair and appropriate authorship

Responsible persons/bodies	Measures
Research institutions	Implement relevant educational courses, set a policy and discourage inappropriate authorship
Authors	Familiarise with available authorship guidelines and journal instructions for authors; agree on the responsibilities, order and place of listing co-authors early at the start of research. Avoid misconduct and unfair authorship by self-regulation
Reviewers	Familiarise with available guidelines, report suspected authorship to editors
Editors	Stick to authorship criteria and journal instructions, obtain author contributions statements, resolve disputes by cooperating with authors or research institutions
Publishers	Ensure proper guidance and interpretation of authorship in instructions for authors; adopt field-specific recommendations of learned associations
Learned associations	Develop and update policy statements and authorship criteria

Table 2 Essential editorial policy statements and criteria on authorship

Source	Society, date	Main messages/comment
Ethical Considerations in the Conduct and Reporting of Research: Authorship and Contributorship	ICMJE, 2009	Widely promoted authorship criteria for biomedical journals. The interpretation of the criteria may vary across the journals. Minimal and substantive contributions are not defined, and order of listing authors is not explained
Guidelines for Authors and Translators of Scientific Articles to be Published in English	EASE, 2011	First authors are those who contribute most. Those who contribute substantially but do not meet authorship criteria should be acknowledged. Listing contributors without their agreement is ethically unacceptable
CSE's White Paper on Promoting Integrity in Scientific Journal Publications	CSE, 2012	A comprehensive editorial policy document stressing out, among many other points, the importance of defining authorship or contributorship in a journal's Instructions for Authors and settling authorship disputes by editors in cooperation with corresponding authors and research institutions. Authorship bears responsibility for integrity of the work. Each co-author in multiauthor articles should be responsible for specific part of the work and aware of other co-authors' contributions
A position statement developed at the 2nd World Conference on Research Integrity, Singapore, 2010	COPE, 2011	Journals should adopt an authorship policy relevant to their field of science. Instructions for authors should guide on what constitutes authorship. For multiauthor articles, each author should take responsibility for a certain part of the work; all authors should contribute significantly to and be familiar with the entire paper. Contributions should be disclosed in a separate statement. Settling authorship disputes is the prime responsibility of authors
Algorithms on common publishing ethics problems	COPE, 2008	Flowcharts guide on how to resolve authorship disputes (addition and removal of authors before and after publication), how to spot authorship problems and what to do when ghost, guest or gift authorship is suspected
Policy statements	WAME, 2007	A scholarly journal's authorship policy should be transparent and accessible. Ghost and guest authorships are dishonest acts. Editors can require limit number of authors, if not all authors satisfy the criteria. Order of authors should be decided by authors themselves
